DETAILS OF WORK (State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, comenting points, and all other important proposed work) Well was spudded on September 28, 1962 and drilled a 12-1/4" hole to 200'. 8-5/8" casing was set at 200' and comented with 180 sacks aimed with 28 calcium chloride. After waiting on coment to set, tested easing with 500 psi for 30 minutes with no indication of pressure drop. Resumed drilling operation. I understand that this plan of work must receive approval in writing by the Geological Survey before operation and management of the company PAN AMERICAN PETROIEUM CORPORATION Address. F. C. Box 480		San Juan		New Mexico	
DETAILS OF WORK (State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work) Well was spudded on September 28, 1962 and drilled a 12-1/4" hole to 200". 8-5/8" pasing was set at 200" and commetted with 180 sacks mixed with 26 calcium chloride. Circulated 30 sacks coment. After waiting on coment to set, tested easing with 500 pai for 30 minutes with no indication of pressure drop. Resumed drilling operation.
