(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

Well No. 2 is located 23 ft. from N line and 30 ft. from E line of sec. 22

1/4 Sec. and Sec. No. 7 (Twp.) (Range) (Meridian)
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 4001 ft. (assumed)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Well was spudded 3/1/59. 30' of 9 5/8" casing set 30' with 200 sacks cement. Tested casing with 500# pressure, 30 minutes, no leaks. Filled cement plug 3/5/59. Tested for 30 minutes with 500# pressure - no drop in pressure.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

The first part of the paper discusses the importance of understanding the underlying mechanisms of the system. This is followed by a detailed description of the experimental setup and the data collection process. The results are then presented in a series of tables and figures, which are discussed in detail in the following sections.

The second part of the paper focuses on the analysis of the data. This involves a series of statistical tests and a comparison of the results with theoretical models. The third part of the paper discusses the implications of the findings and the potential applications of the results. The final part of the paper is a conclusion, which summarizes the main findings and provides a brief overview of the paper.
