New Mexico  
(State or Territory)

The elevation of the derrick floor above sea level is 5698 ft. (RDM)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

As a result of not obtaining oil or gas in commercial quantities, we propose to abandon the Gallup formation of Gallegos Canyon Unit well No. 85 as follows:

1. Dig up and pull rods and pump.
2. Squeeze Gallup perforations with 100 sacks neat cement.
3. Drill out cement and test squeeze perforations with 2500 psi.
4. Retrieve "DB" plug.
5. Run Dakota tubing and land in packer to produce Dakota zone from below packer.
6. Flow Dakota zone to clean up and complete well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
