☐ Change of Plans
☒ New Construction
☐ Non-Routine Fracturing
☐ Water Shut-Off
☐ Conversion to Injection
☐ Dispose Water

13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Roddy Production Company proposes to lay 1542' of 2" or 3" steel gas line from the current tie in (sales) point on EPFS gathering system to the Lucerne Federal No. 6 location to tie this well into an existing Roddy gathering system. The gas will be sold through the existing Lucerne Federal No. 6 CDP. The existing meter on the No. 4 location will be used as an allocation meter. The proposed line route is shown on the attached survey plat. The route has been surveyed for cultural resources. The proposed route parallels an existing EPFS gathering line and will stay in the north side of the existing right of way disturbance as much as possible to minimize additional surface disturbance between PI's 0+00 and 12+48.46. The excavated dirt from the trench will be stockpiled over the EPFS line as much as possible. Some dirt will be borrowed from the hillside between PI's 9+23.26 and 12+48.46 to level the construction cut from the Conoco right of way. All areas disturbed by construction will be seeded after construction is complete. The line will be buried 48" below ground level. The line will be constructed of new coated API Grade B line pipe. MAOP is 500 psig. Normal operating pressure will be 75 psig or less. The line will be tested to 500 psig prior to being placed in service.
