13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Please disregard the NOI dated 7/20/99 to only add Lewis Shale pay to the MV interval. Plans are now to add additional MV pay (including Lewis Shale), add the Pictured Cliffs pay, and then commingle production from both MV & PC pools per DHC Order R-11187. The individual well commingling application will be filed and approval will be received before actual commingling occurs. Brief details of the procedure we will use are as follow:

MIRU. COOH w/tubing. Cleanout to PBTD. Run GR/CCL/CBL to select perms. If records or logs indicate no cement across the zones of interest, it may be necessary to shoot squeeze holes in casing and pump sufficient volumes of cement to cover and isolate these intervals. Set CIBP above top perf. And Lewis Shale pay and stimulate. Isolate all Mesaverde intervals including Lewis Shale with a CIBP & then perforate and stimulate the Pictured Cliffs interval. Cleanout out to CIBP set between MV & PC interval. RIH w/tubing and flow test the Pictured Cliffs for several months until pressures stabilize.

Once pressure from the Pictured Cliffs is below initial Mesaverde pressure, RIH & drillout remaining CIBPs, then cleanout out to PBTD. Rerun tubing and then commingle production from both pools.

14. I hereby certify that the foregoing is true and correct
