(State or Territory)

The elevation of the derrick floor above sea level is **6385** ft.

**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

The Dakota zone has been incapable of production since October 1961. It is intended to temporarily abandon the Dakota zone of the Mesa Verde-Dakota dual completion. An annual packer leakage test will continue to be conducted.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
