The elevation of the derrick floor above sea level is 6897 ft. (Ungrated ground)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill the above well to approximately 6500 feet with rotary tools. 5 drill stem tests are anticipated: one over the Fruitland pay section, one over the Pictured Cliffs pay section, and three over the Mesaverde pay section. Casing will be set on top of the Mesaverde formation. If stimulation is necessary the pay will be shot open with HCl and clean out will be with cable tools.

The following casing program is proposed:

Size	Depth	Amount	Remarks
10-3/4"	300'	200	200% of theoretical amount to circulate.
7"	5700'	300	

Copies of location plats are attached. A copy of any survey taken will be submitted upon completion of well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
