Re: El Paso Natural Gas Co.
San Juan 29-4 Unit #7 (PM)
D-8-29N-4W

Dear Mr. Dawson:

The subject well has been under study for remedial action since 1962.

An intention to check for casing failure was filed in 1971.

No subsequent report of check for casing failure has been received.

The latest Packer-Leakage test report was in 1973.

Contact Mr. Charles Gholson of this office and schedule a witnessed Packer-Leakage Test and Bradenhead Test prior to October 1, 1976.

In the absence of casing failure or packer failure a longer period of Temporary Abandonment will be considered at that time.

If there are questions, please contact us.

Yours very truly,

A. R. Kendrick

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.) *

A second approval is requested to retain this well in its present temporarily abandoned status. The Pictured Cliffs formation of this well has never produced commercially and is shut-in. The Mesa Verde formation was produced through a temporary line until the practice was discontinued in 1962 at the request of the U.S. Forest Service. The well will be investigated for a casing leak, and if it has one, abandonment or workover will be recommended. If the well does not have a casing leak, it is intended to maintain the well in a shut in status for possible future production in the event it becomes economically feasible to lay a permanent line to the well. This well is visited periodically, at which time both the bradenhead and surface production equipment is checked. No changes have been noted during these visits that would indicate any damage has occurred to the casing strings.

TEMPORARY ABANDONMENT
EXPIRES

OCT 31 1976

18. I hereby certify that the foregoing is true and correct
