13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Plans are to add the Basin Fruitland Coal interval to the existing Mesaverde well and then commingle production from both zones per Reference DHC Order 10770. The individual well DHC application has been submitted to Santa Fe for approval. Brief details of the procedure we will be using are as follows:

MIRU. COOH w/production tubing isolate existing Mesaverde interval with bridge plug. Pressure test the casing and remediate with cement if casing fails pressure test. Run GR/CCL/CBL and remediate with cement if the interval completing isn't adequately covered. Perforate and stimulate the Fruitland Coal. Flow test the Fruitland coal until pressures stabilize. Then return and remove the bridge plug and return well to production with the Mesaverde and the Fruitland Coal commingled, once State's approval has been received. Attached is the C102 for the Basin Fruitland Coal zone.
