13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Due to Phillips' work load and scheduling problems and the fact that this well is in the Big Gam Closure area, we were not able to complete the work this year. Plans have also changed slightly, to running a cased hole log to evaluate the Dakota & Mesaverde zones.

If the DK zone looks unproductive, then we will be TAing the DK interval of this well by cementing a 50' plug above the DK perforations and then complete this as a single MV recompletion after the casing tests are run. But if the DK looks as if there is potential, we will then try to restimulate the Dakota and then complete the MV intervals by perforating, acidizing and stimulating. There will be a flow back period for the MV interval before we commingle the two zones. This will be done only after the DHC paperwork has been submitted and approved. Plans are to have this work started by August 1, 2002. See an attached C102 for the MV interval.
