DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill to test the Dakota formation at approximately 1600'. We will set 100' of 8 5/8" surface pipe and circulate cement to surface. We will drill 7 7/8" hole. In case of a productive zone 5 1/2" casing will be set through it and then perforated for completion attempt.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced
