13. Describe Proposed or Completed Operations

It is intended to restimulate the Mesaverde formation by treating the original completion with a mixture of acids and gel breakers. A rig will MIRU, ND wellhead, NU BOP, and pull the production tubing. The restimulation will be complete in two stages at frac rates through the original perforations. After flowback, tubing will be landed at +/- 6253'. The well will then be placed back on production.
