Well No. 2 is located 667 ft. from S line and 633 ft. from W line of sec. 19
NE Section 19 30N RMPH
wildcat (4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Mit Arriba (Field) (County or Subdivision) (State of New Mexico)

The elevation of the derrick floor above sea level is 7522 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings, indicate mudding jobs, cementing points, and all other important proposed work)

It is intended to move a rig over this well and plug the Mesa Verde zone and re-complete in the Pictured Cliffs formation.

Proposed work as follows:

1. Set drillable retainer in casing @ 6200' squeeze Mesa Verde from 6270' - 6684' with 125 sacks reg. cement. Drop bridging bar for additional shut off.
2. Perforate below the Pictured Cliffs at 4500' and above at 4050', set retainer @ 4450' and cement through lower perforation and circulate through upper perforations.
3. If cement does not circulate a temperature survey will be run. The upper perforations will then be squeezed off.
4. Run Schlumberger Gamma Ray log. Perforate opposite Pictured Cliffs with four shots/ft. 5. Sand trap Pictured Cliffs.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
