13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the final site is ready for final inspection.)

Phillips plans are to run a casing integrity test on this well by setting a packer in the hole to isolate the coal interval. We will then run tubing, inject packer inhibited fluid down the backside and pressure up on the casing and test. The packer will remain in the hole for future tests. Plans are to continue using this well as a pressure observation well.

We are planning on completing this casing integrity test around the middle of July since we have 2 other wells that we have to run casing tests on and they are in the Elk calving closure area and we would like to schedule all of them together. A subsequent sundry will be submitted upon completion.
