The elevation of the derrick floor above sea level is **5415** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Our change of plan is to dual complete well No. 1 in the Fruitland and Pictured Cliffs formation. Our program is as follows:

2000' of 5-1/2" OD casing with 300 sacks of regular cement.

Set Baker Model "D" production packer to separate the two zones.

Produce Fruitland gas through annulus of 5-1/2" OD casing and Pictured Cliffs gas through 2" tubing set through production packer.

Run 1" siphon and set in Fruitland zone.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
