BRIEF DESCRIPTION OF COMPLETION	FORMATION, OPEN HOLE OR PERF., SINGLE, DUAL, TRIPLE, OIL, GAS, WATER, DRY, ETC.
<p>Drilled to 1448' T.D. with rotary. Cored 1332 to 1448. DST 1337-1448. Recovered 20' mud, no show of gas. Set 10-3/4" surface casing @ 102'. Set 8-5/8" intermediate casing @ 272' to shut off Ojo Alamo water sand. Temporarily abandoned.</p>	
<p>This is one of six initial exploratory wells drilled to test the Pictured Cliffs formation. Present information does not justify setting casing to test well. Correlation with information developed on future wells may later indicate the advisability of setting casing and shooting with nitro-glycerine in an effort to obtain production.</p>
