(Other) Install Cathodic Protection

(Note: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Proposed installation of cathodic protection to well casing:

Procedure: Drill a 6" diameter hole, 300 ft. deep within the lease location boundary. Six lida ST-1.60/50 anodes will be installed below the uppermost waterbearing formation, and back filled with coke breeze (99.5% carbon) to completely surround the anodes. Backfill rest of hole with gravel of drilling tailings.

A thermoelectric unit will be installed between the groundbed and the well casing and approximately 100-150 ft. of buried cable will tie the well casing to the thermoelectric unit to the anode. 3/8" stainless steel tubing will be buried from the wellhead to the thermoelectric unit to provide fuel gas for the unit.

All work and additions will take place within the lease location boundary.

Attached is a schematic of Moncrief Fed. #1 location and proposed cathodic protection addition.

UNOCAL's completion expectation is by March 1, 1991.
