DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spudded 11' hole on September 20, 1960, and drilled to 213'. Set 8-1/8" casing at 212' with 200 sacks cement containing 25 calcium chloride. Circulated 80 sacks of cement. After waiting on cement, tested 8-1/8" casing with 450 psi for 30 minutes which held with no indication of pressure drop. Reduced hole to 7-7/8" at 213' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
