February 26, 1962

J. Glenn Turner - Nye

Well No. 9-1 is located 1,810 ft. from [N] line and 900 ft. from [W] line of sec. 9

NW 1/4 Section 9 T29-North R10-W H.M.P.M.  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Basin Dakota - Blanco M. V. San Juan County New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 5,855 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Notice of intention to drill this well filed under date of January 11, 1962 indicated this would be a Dakota test. Information now available indicated the Mesa Verde will probably be productive, and it is now planned to make this a "Dual completion".

Mesa Verde as well as the Dakota will be perforated, sand water fractured, and completed. Production Packer will be set between zones, and 2-1/16" tubing will be set to produce the Dakota, and 1-1/2" tubing to produce the Mesa Verde.

Perforations - 2 shots per foot - will be at depths indicated by the logs.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
