DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Spudded 12-1/4" hole November 15, 1960, and drilled to 357'. Set 8-5/8" casing at 357' with 200 sacks cement containing 2% calcium chloride. Circulated 15 sacks cement. After waiting on cement, tested casing with 500 psi for 30 minutes, which held with no indication of pressure drop. Reduced hole to 7-7/8" at 357' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
