DIST. 3

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

All measurements are R.S. We propose to drill this well with rotary equipment to an approximate T.D. of 6800' to test the Paradox formation. 100' of 12 1/2" casing will be set and cemented to surface. Approximately 1000' of 9 5/8" intermediate casing will be set and cemented with 200 sacks regular for water flows. A two stage cement collar will be set at 1000' and cemented with 100 sacks to protect the Dakota formation. A 7" production string will be set to T.D. and cemented if commercial production is encountered.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
