FULL DETAILS OF PROPOSED PLAN OF WORK
(FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS)

Production was shut off due to entry of mud into the casing. We propose to pull tubing and run a retrievable bridge plug and set at approximately 5000'. We will run a casing corrosion log to determine the area of corrosion. A squeeze packer will be run and the leak located. Cement will be pumped into the leak to cover the area of bad casing. The cement will be drilled out and the casing tested to 2000# psi for 30 minutes. The bridge plug will be pulled, tubing and packer run and well placed on production.
