We propose to drill 11" hole to 250', set 8 5/8" casing, circulate cement to surface. Drill 7 7/8" hole to approx. 5800' to test Dakota. We will set 5 1/2" casing if gas or oil production is encountered. We will cement bottom with enough cement to cover all oil or gas shows and perforate for production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
