 After well was drilled to T.D. it was shot with 1500 lbs. from
 6297. Steam-out operations were begun with cable tools.
 The well was cleaned out to about 6150' when the hole caved
 excessively and one string of tools were lost. These tools were
 by-passed, with some difficulty, and the hole cleaned out to about
 6200, where the hole caved again and the second string of tools
 were lost. This string was recovered. The hole filled up to 5800'.
 After cleaning out again to 6185' the hole was temporarily abandoned.

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked" or left in the well, give the size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or bailing.
