(Field)

Rio Arriba

(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is 4095 ft. (G.L.)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill the deep well to approximately 1000 feet to test Pictured Cliffs formation. Casing tools will be used from surface to total depth. Casing will be set on top of pay. Pay will be shot with SNB and hole cleaned out.

The following casing program is proposed:

Size	Depth	Amount	Remarks
13-3/8"	900'	100	100% of calculated amount to circulate.
7"	3250'	100	100% of calculated amount to fill 1000' above shoe.

This quantity of cement will be used unless plans are indicated above the Pictured Cliffs, in which case the volume will be altered to obtain the protection desired.

(continued on back of page)

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Well No. _____ is located _____ ft. from _____ line and _____ ft. from _____ line of sec. _____
(Township) (Range) (Section)
(County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objectives and show sizes, weights, and lengths of proposed casing including joints, cement, and other important proposed work)

In addition to the above, the following data are furnished for the purpose of showing the location of the well and the nature of the work to be done:

14'	30'
10-2/4"	10-2/4"
8-7/8"	8-7/8"

Copies of location plate are attached.

A copy of any survey will be submitted upon completion of well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
