Well No. 36-11 is located 1450 ft. from N line and 790 ft. from E line of sec. 11NE 1/4 Section 11
(1/4 Sec. and Sec. No.)T31N
(Twp.)16W
(Range)106M
(Meridian)Undesignated Dakota
(Field)Rio Arriba
(County or Subdivision)New Mexico
(State or Territory)The elevation of the derrick floor above sea level is 6425 ft. Ground Level

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Well was spudded October 16, 1959, and drilled to 300 feet with rotary tools. 13-3/8" casing was set in 17-1/4" hole to 297 feet and cemented with 275 sacks cement containing 2% calcium chloride. Cement was circulated. After waiting on cement, casing was tested with 350 psi for 30 minutes with no indication of pressure drop. Reduced hole to 13-1/4" at 300' and resumed drilling operation.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

1. The first part of the paper discusses the importance of the study of the history of the United States. It is argued that the study of the history of the United States is essential for a full understanding of the country and its people. The paper then discusses the importance of the study of the history of the United States in the context of the current political and social climate.
