If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Devon Energy made several attempts to remove the existing 5 1/2" predrilled but could not jar it loose. The Fruitland coal overburden procedure was shortened. The re-cavitation steps were dropped from the schedule and replaced with 2000 gallon 10% HCL acid treatment to remove scale from the tubing and existing liner. Rig was released on 7/21/99.

The existing 5 1/2" liner setting depths did not change.
 7/8" tubing was set at 3420' GL.

4. I hereby certify that the foregoing is true and correct.
