Thomas Oil & Gas, Inc., rigged up on this well during the first week of July, 1998 with the intent of deepening the well and perforating it in the Dakota Sand at 490 feet. We encountered hard cement at 460 feet. The well currently has no perforations. After deliberating the possibility of drilling out unknown material and of having virtually no rat hole, it was decided that it would be economically prudent to step over fifty feet to the West and drill a new hole.
