The elevation of the derrick floor above sea level is 9710 ft. (Ungraded Ground)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding job, cementing points, and all other important proposed work)

We propose to drill the above well to approximately 4700 feet. Rotary tools will be used to total depth. Casing will be set on top of Cliffhouse. Monterrey formation will be drilled with gas and cleaned out with gas after shot with SGO.

The following casing program is proposed:

Size	Depth	Weight	Remarks
9-5/8"	250'	250	17% of calculated amount to circulate.
7"	3800'	300	15% of calculated amount to fill 1260' above shoe.

Copies of location plat are attached. A copy of any survey taken will be submitted upon completion of well.

Acreage plat for Designated Drilling Unit will be submitted at a later date.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
