The above captioned wells are one and the same. It is now operated by Lee M. Crane as shown above.

We have well files on two other wells in the same 40 acre tract.

There is another old hole on the tract that we do not have any file on. It must be the one drilled by Phillips & McCoy back in 1933 best I can tell from the notes you and Emery have been sending back and forth. Send me a copy of anything you have for such a well so that I can try to check it out on the ground.

If this doesn't clear the situation, let's get together more information on everything in the section and work from there.
