Fogelson

Well No. 1-35 is located 1180 ft. from N line and 2400 ft. from E line of sec. 35SW/4 SE/4 Sec. 35
($\frac{1}{4}$ Sec. and Sec. No.)30N
(Twp.)11W
(Range)NMPM
(Meridian)Basin

(Field)

San Juan

(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is 5783 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Plan to drill a 12-1/4" hole to approximately 225' and run 8-5/8" surface casing cemented with sufficient cement to circulate. A 7-7/8" hole will then be drilled to a total depth of approximately 6825' and 4-1/2" casing run. The casing will be cemented in two stages. The first stage will be cemented in from TD to cover the Dakota formation, approx. 200 sx., the second stage with 100 sx. to cover the Pictured Cliffs formation. The Dakota formation will be selectively perforated, SWF and tubing run and the well completed.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
