DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Well has excessive bradenhead pressure. Propose to set bridging plug in 5-1/2" liner at 4000', run cement bond log and corrosion log from top of cement to surface and locate source of pressure by temperature survey, and squeeze and/or perforate, and attempt to circulate cement to surface depending on casing condition. If unable to circulate, will squeeze cement to cover source of bradenhead pressure.
