Dear Al:

Following is a review of what has happened on the well which is located 890/N and 890/W Section 35-30N-14W.

The well was drilled by Compass Exploration in April 1960 and was completed as a gas well in the Dakota Formation. It was given an allowable in April 1960 and produced into 1961. In August 1961 they attempted a workover on the well and it was not successful. The well was plugged and abandoned in April 1962. To this point we have a complete file on this well and I am sure that you do too.

In March 1965 Thomas A. Dugan filed a Notice of Intention to re-enter and attempt a Fruitland completion. I have talked to Mr. Dugan this morning and he states they did re-enter the well but they neglected to file forms indicating this. This they say they will do immediately. I understand they did drill out the plugs to the Fruitland, ran and cemented casing and completed a small gas well; however it was not large enough that they could secure a pipeline connection. The present status is that it is a shut-in gas well in the Fruitland Formation.

Compass replaced the original well with the Aztec #1-X well which was located 790/N and 1650/W. I suggest that you file this letter in the file for the T.A. Dugan Aztec #1.

Yours very truly
