DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate gridding jobs, cementing points, and all other important proposed work)

Plan to drill a 12 1/4" hole to approx. 200' and run 8 5/8" O.D. surface csg. cemented w/sufficient cement to circulate. A 7 7/8" hole will then be drilled to a total depth of approx. 7000' and 4 1/2" production csg. run and cemented in two stages. The first stage will be cemented with 900 cu. ft. of cement to cover the Mesaverde formation, the second stage will then be cemented thru a stage collar and cement brought above the Pictured Cliffs formation. The Dakota formation will then be selectively perforated and sand, water fractured.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
