The elevation of the derrick floor above sea level is _____ ft. (To report later)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The above well was spudded on December 23, 1962 and drilled to a depth of 355'. 8-5/8" casing was set at that depth with 210 sacks of neat Inzer cement containing 2% calcium chloride. Circulated 25 sacks to surface. After waiting on cement, tested casing with 1000 psi for 30 minutes. Test o.k. Reduced hole to 7-7/8" at 355' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
