(Meridian)

New Mexico

(Field)

(County or Subdivision)

(State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft.

(Will be furnished later.)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cement-  
ing points, and all other important proposed work.)  
We propose to drill with rotary tools to the top of the Picture Cliff formation, set 5 1/2" casing, then move in cable tools to drill in, then shoot with SNG for gas completion in Picture Cliff formation.

Casing Program:

100' of 9 5/8" Surface casing-Circulate cement to surface.

2600' of 5 1/2" Production String.

2700' of 1" Siphon Line.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

## DETAILS OF WORK

1. The first step in the process of the investigation is the identification of the problem. This is done by the investigator who is assigned to the case. The investigator must first identify the problem and then determine the scope of the investigation. This is done by the investigator who is assigned to the case. The investigator must first identify the problem and then determine the scope of the investigation. This is done by the investigator who is assigned to the case.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be resumed.
