Wildcat  
(Field)

San Juan  
(County or Subdivision)

New Mexico  
(State or Territory)

Ground Level

The elevation of the surface above sea level is 5128 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

A 9-3/4" hole (Surface) will be drilled to an approximate depth of 40' and 7-5/8" surface pipe run and cemented to the surface. A 6-3/4" hole will then be drilled to a sufficient depth to test the lower Gallup - Sanassee formation. If commercial production is encountered, 4-1/2" casing will be run and cemented and the well sand-oil fractured.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company Blaine Townstone

Address 475 Huntington Drive

San Marino, Calif.
