DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a 12 1/2" hole to 250', set 8 5/8" casing, circulate cement to surface. Drill a 7 7/8" hole to approximately 5200' to test Dakota. We plan to set 5 1/2" casing if commercial oil or gas shows are indicated. We will cement bottom with enough cement to cover all oil or gas shows and perforate for production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
