(Range)

10PM  
(Meridian)

Basin - Dakota  
(Field)

San Juan  
(County or Subdivision)

New Mexico  
(State or Territory)

The elevation of the ground level above sea level is 5838 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

A 12 1/4" hole will be drilled to approximately 250' and 8 5/8" surface casing run and cemented with sufficient cement to circulate, approx. 150 sq. A 7 7/8" hole will then be drilled to a total depth of approximately 7000' and 4 1/2" casing run to total depth and cemented in two stages. The first stage cement will be brought up over the Point Lookout. A two stage tool will then be set below the Pictured Cliffs and cement brought up above the Fruitland Formation. The Dakota formation will then be selectively perforated and sand water fractured.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
