The elevation of the derrick floor above sea level is _____ ft. **5548 G. L.**

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Compass proposes to drill an oil and/or gas test at the above location to an approximate total depth of **6200'**. The well will be drilled through the Dakota formation. Drilling procedure to be as follows:

- 1.) Drill to approximately 250', run 8-5/8" surface casing and set with sufficient cement to circulate
- 2.) Drill to total depth (6200'), run IES & GRS logs.
- 3.) If production is encountered, run 4-1/2" casing and cement with approximately 125 sxs.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
