DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill with rotary tools using mud to approximately 4500' (Top of Cliffhouse) and set 7-5/8" casing, then drill with rotary tools using gas to approximately 7700' (Top of Dakota) and set 5" casing, then drill with mud or gas (which ever is possible or practical) to the Dakota section and possibly shooting with SDS, sand or hydro-fracturing. In the event the Dakota formation is non-commercial it will be plugged back to top of known and completion made thru the Mesa Verde.

Proposed Casing Program

250' - 10-3/4" 32.75# 8-10 ss casing	- Cemented to surface
4500' - 7-5/8" 26.40# 4-55 ss casing	- Cemented with 100 ss.
7700' - 5-1/2" 17# 4-55 ss casing	- Cemented with 100 ss.
7500' - 8" 4-55 S S tubing	

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
