SUNDRY NOTICES AND REPORTS ON WELLS

NOTICE OF INTENTION TO DRILL		SUBSEQUENT REPORT OF WATER SHUT-OFF	
NOTICE OF INTENTION TO CHANGE PLANS		SUBSEQUENT REPORT OF SHOOTING OR ACIDIZING	
NOTICE OF INTENTION TO TEST WATER SHUT-OFF		SUBSEQUENT REPORT OF ALTERING CASING	
NOTICE OF INTENTION TO RE-DRILL OR REPAIR WELL		SUBSEQUENT REPORT OF RE-DRILLING OR REPAIR	
NOTICE OF INTENTION TO SHOOT OR ACIDIZE		SUBSEQUENT REPORT OF ABANDONMENT	
NOTICE OF INTENTION TO PULL OR ALTER CASING		SUPPLEMENTARY WELL HISTORY	
NOTICE OF INTENTION TO ABANDON WELL			

(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

March 11, 1954
Flores
Well No. 4-80 is located 970 ft. from N line and 1450 ft. from E line of sec. 24
2 1/2 Sec. 24 30 N 9 W RMPM
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
New Mexico San Juan New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 5830 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casing; indicate mudding jobs, cementing points, and all other important proposed work)

After cement set on 7-5/8" casing set at 4122', hole was blown dry with gas and plug drilled. Hole remained dry and was drilled with gas to 46 of 4645'. At 4645' approximately 10,000 MCF of gas was encountered, making it impractical to attempt to drill on to the Dakota using gas.
It is planned to complete at present TD as a New Verde gas well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

By J. M. Wallace

Title Supt.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry must be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author outlines the various methods used to collect and analyze the data. These include direct observation, interviews with key personnel, and the use of specialized software tools. Each method is described in detail, highlighting its strengths and limitations.

The third part of the document presents the results of the study. It shows that there is a significant correlation between the variables being studied. The data indicates that as one variable increases, the other tends to decrease, which is contrary to the initial hypothesis.

Finally, the document concludes with a series of recommendations for future research. It suggests that further studies should be conducted to explore the underlying causes of the observed trends. Additionally, it recommends that the findings be applied to improve the efficiency of the processes being studied.

The following table provides a summary of the key findings from the study. It shows the relationship between the different variables and the overall impact on the system.

Variable	Impact	Significance
Input A	Positive	High
Input B	Negative	Medium
Input C	Neutral	Low

Based on the data presented in the table, it is clear that Input A has the most significant positive impact on the system. Conversely, Input B has a notable negative effect, while Input C appears to have little to no impact.

The author also notes that there are several factors that could influence the results of the study. These include the quality of the data collected, the accuracy of the measurements, and the potential for external influences.

In conclusion, the study has provided valuable insights into the relationship between the variables being examined. The findings suggest that there is a need for further research to better understand the underlying mechanisms at play.

The final section of the document discusses the implications of the study for practice. It suggests that the findings can be used to inform decision-making and to develop more effective strategies for managing the system.

The author also acknowledges the limitations of the study. One major limitation is the relatively small sample size, which may limit the generalizability of the findings. Another limitation is the potential for bias in the data collection process.

Despite these limitations, the study provides a solid foundation for further research. It highlights the need for continued exploration of the topic and the importance of using rigorous methods to collect and analyze data.

In the future, it would be beneficial to conduct larger-scale studies that include a wider range of variables and participants. This would help to confirm the findings and provide a more comprehensive understanding of the system being studied.
