13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

After perforating and fracing the Cliff House, and Lewis Shale formations, the Cliffhouse proved to be an extremely wet zone with water that is not normal or native to the MV formation (blackish smelly water, we think due to proximity of injection wells in area). making approximately 40 BBLs water per day. We intend to do a cement squeeze on perforations between 3629' and 3725', approximately 10 perfs in all. Plan on pumping 50 sks of 15.6 lb. 1.18 yeild w/ 1% CAC12.

Plan on doing work on or around 5/11/01.

I hereby certify that the foregoing is true and correct
