Re: E. E. Elliott "A" No. 1  
1973 Deliverability Test

*L-15-30-9*  
~~*A-11-29-9*~~

Mr. Emery C. Arnold  
New Mexico Oil Conservation Commission  
1000 Rio Brazos Road  
Aztec, New Mexico 87410

Dear Sir:

Please refer to the most recent deliverability test submitted on October 10, 1973, for the E. E. Elliott "A" No. 1. This test is indicated as an initial and annual test after compressor installation. Based on previous deliverability tests, we feel that the 1973 test is not indicative of the well's true capability.

Since the well can make its allowable without the compressor, the compressor was shut in on December 1, 1973. Future use of the compressor will be made only to insure that allowable production for the well is met. Therefore, this well will be retested without the compressor and the new test submitted as the 1973 annual test.

On October 12, 1973, the New Mexico Oil Conservation Commission Gas Supplement No. (NW) 3365 changed the allowable for the subject well to conform to the 1973 initial and annual deliverability test. Since the compressor is no longer being used, we request that the 1972 test be reinstated and the allowables for August through December be adjusted on the basis of the 1972 test. We would appreciate your consideration and early approval of our request.

Yours very truly,

  
L. O. Speer, Jr.  
Area Superintendent
