DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs cementing points, and all other important proposed work)

As a result of not obtaining oil or gas in commercial quantities we propose to plug and abandon J. J. Lomori "A" Well #6 as follows:

1. Spot 50 sack cement plug on bottom (approximately 400' of fill-up in casing) and squeeze with minimum pressure to leave perforations covered by cement.
2. Fill hole with fluid.
3. Pump 50 sacks of cement down 5-1/2" -- 8-5/8" annulus (approximately 255' of fill to anchor pipe).
4. Remove well head and surface equipment.
5. Spot 5 sacks of cement for surface plug (0-40') and erect dry hole marker.
6. Plug and abandonment by above procedure to permit possible re-entry for future secondary recovery purposes.

(over)

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
