Re: Dikes around tanks and delinquent reports

Gentlemen:

Due to concern about the possibility of oil pollution within the drainage area of the Farmington Lake reservoir, this office is requiring that operators construct dikes around their tanks which are located in the drainage area. These dikes will form a reservoir with a capacity one third larger than the capacity of the enclosed tanks.

Your company operates the following wells, which have tanks within the lake drainage area:

New Mexico Federal #2 A-17-30N-12W

New Mexico Federal #3 A-18-30N-12W ✓

Please notify this office when the dikes are completed so that we may inspect them.

Also, this office has not been receiving a copy of the Operators Monthly Report, Form C-115, since September of last year. Please file the delinquent reports immediately to avoid shut-in orders and continue to file the reports as directed on the distribution list printed on the form.

If you have any questions, please call.

Yours truly,

Frank T. Chavez
District Supervisor
