DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spudded 7-7/8" hole on September 29, 1959 and drilled to 215'. Reamed 7-7/8" hole to 12-1/4" hole to 211'. 8-5/8" casing was set at 210' with 160 sacks cement containing 2% calcium chloride. Circulated 48 sacks of cement. After waiting on cement, casing and water shut off were tested with 400 psi for thirty minutes, which held with no indication of pressure drop. Reduced hole to 7-7/8" at 211' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
