8-30N-11W, San Juan Co, N.M.*

Dear Sir:

Following is the information we have on subject well:

Spudded 10-1-52, Completed 1-14-53; TD 2077; 10-3/4" surface casing at 30' with 30 sx; 8-5/8 @ 132 w/60 sx; Shot 122 quarts from 2023-2077; Initial potential 1806 AOP after 3 hrs; Shut-in casing pressure 624#; Top Pictured Cliffs, 2010;

The well was recompleted in 1959 but we never received any reports of the details of the workover. A deliverability test was made in October 1959 which gave the well a deliverability of 176 MCFPD. We have received no information since that time.

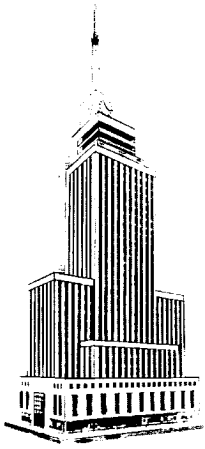

We trust this information will help you.

Yours very truly

*Emery C. Arnold
Supervisor, District #3*

New Mexico Oil & Gas Conservation Commission
Aztec, N. M.

Attention: Mr. Emory Arnold

Gentlemen:

We will appreciate your furnishing us whatever technical data you have respecting a Pictured Cliffs gas well drilled by M. J. Florance, probably in 1953, which we believe to be located and designated as above.

We understand the well is not currently on production. We thought you may have a file on the same which would indicate to us the following: casing program, pressures, etc.

We are attempting to evaluate the well. Any information the late Mr. Florance may have had on this well is apparently not available.

Very truly yours,

Edward H. Tenison
