Oil Conservation Commission  
State of New Mexico  
120 East Chaco  
Aztec, New Mexico

ATTENTION: Emery C. Arnold

Dear Mr. Arnold:

I have received your letter concerning our USGS Well Log Form and requesting information on tubing, formation tops and perforations. Tubing was set at 1120 feet in this well. There were no formation tops as this well was in Mancos formation from surface to total depth. We were unable to pick the top of the Gallup Member of this formation. Sand oil fracturing was accomplished through perforations from 1114 to 1195 feet.

If you desire more information or if your commission requires a copy of our electric log, please notify us.

Yours very truly,

ARIZONA EXPLORATIONS, INC.

C. W. Josey, Jr.
