December 29, 19 58

Well No. **2-A** is located **1980** ft. from **N** line and **1980** ft. from **E** line of sec. **12**  
**NW SE/4 Sec. 12** **30N** **16W** **NMPM**  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
**Undesignated** **San Juan** **New Mexico**  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **5493** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is now the intention to drill through the bottom of the Point Lookout using rotary tools and mud circulation. A string of 7-5/8" casing will then be landed as a temporary water shut-off. Drilling to TD would be carried on from that point using cable tools. 5-1/2" casing would then be cemented and the 7-5/8" casing pulled. Possible productive intervals will be perforated and sandoil fractured.

Estimated Total Depth --- 3000'.

Casing Program:

10-3/4" has been set at 128' with 125 sacks cement.

5-1/2" will be set at 3000' with 150 sacks cement.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
